From October 20 to 22, the 20th International Exhibition «UzEnergyExpo-2026» was held at the Uzexpocentre National Exhibition Complex, bringing together leading representatives of the energy sector. The event was organized by the exhibition company International Expo Group, LLC. This year, the exhibition spanned Pavilions 1 and 2, as well as an outdoor display area. It featured approximately 150 companies and brands from 12 countries—including Uzbekistan, Azerbaijan, Belarus, Germany, Italy, Kazakhstan, China, Poland, the Republic of Korea, Russia, Serbia, and Japan—which showcased technologies, equipment, and materials for the region's energy and construction industries.

In recent years, the state has placed significant emphasis on the energy sector, establishing a robust legal framework to support it. Major programs have been launched to develop "green energy" production capacity, and an attractive environment for investors has been created. Modern solar and wind power plants are currently being built across almost every region. In this context, UzEnergyExpo—one of the region's largest energy exhibitions—has taken on particular significance. In 2026, more than 40% of the participants are companies involved in the production and supply of renewable ("green") energy. Other exhibitors are showcasing modern technologies and the latest advancements in power engineering, lighting, automation, electrical equipment, transformers, and cable and conductor products. Each year, UzEnergyExpo serves as a venue for participants to unveil new developments and attracts a wide range of industry professionals, providing a unique platform for the exchange of knowledge, experience, and cutting-edge solutions within the sector.
